Date :2007-09-01. book based on mechanical and electrical specialty high-skilled talents. and vocational training requirements education classes and school characteristics. breaking the traditional disciplines of education to the students ability to apply technology to develop limitations in order to build a practical teaching system module to the project task-driven curriculum. The book includes safe use of electricity and common electrical tools. used electrical instruments. wire insulation connection with the recovery. indoor lighting. electrical installation. interior electrical wiring installation. three-phase asynchronous motor control circuit 6 modules. Each module contains a number of projects. projects proposed for training purposes and requirements from the beginning. set the training content. combined with the use of knowledge points. combined with the necessary theoretical analysis. it theory into practice. the latter part of the project clear steps and scoring criteria. given the practical teaching quantitative reference standard. This book can be used as the application of higher vocational education institutions of electronic technology. electronic information. communication technology. electrical technology. automation and computer applications related to professional training of highly skilled training materials are also available for engineering and technical personnel to use for reference. Contents: Preface module a sequence knowledge of safe use of electricity basics of safe use of electricity the project 1.1 Project 1.2 Project electrical fire protection basic operation 1.3 basic operations of electric shock first aid module two commonly used electrical instruments measure resistance with a multimeter item 2.1. AC and DC voltage. DC current Project 2.2 with insulation resistance meter to measure the three-phase asynchronous motor stator winding insulation resistance measurement project phase 2.3 with a clamp ammeter Four Satisfaction guaranteed, or money back.
